	Quind. Trin.	June 15
	Tres Trin.	June 22
Michaelmas Term begins October 23, ends November 28, and hath 6 Returns, viz.	Tres. Mich.	Octob. 20
	Menf. Mich.	Octob. 27
	Craft. Anim.	Novem. 3
	Craft. Mart.	Novem. 12
	Octab. Mart.	Novem. 18
	Quind. Mart.	Novem. 25

Times prohibiting Marriage.

Marriage comes in on the 13th Day of January, and at Septuagesima-Sunday it is out again, until Low-Sunday; at which time it comes in again, and goes not out till Rogation-Sunday: thence it is forbidden until Trinity-Sunday, from whence it is unforbidden till Advent-Sunday: but then it goes out, and comes not in again till the 15th Day of January next following.

Note, That the Exchequer openeth 8 Days before any Term begins, except the Term of Trinity, in which it openeth but 4 Days before.

January hath XXXI Days.

Last quarter the 7 Day, at at Noon.
 New Moon the 15 Day, at 4 in the Morn:
 First quarter the 21 Day, at 11 at Night.
 Full Moon the 29 Day, at 5 in the Afternoon.

The Use of the Table in Example.

King Henry VIII. began his Reign in the Year 1509, April 22. He reigned 37 Years, 10 Months, and 2 Days. It is since he began his Reign 215 Years, April 22. 1724. Now to know the Time since the End of his Reign, before his Name standing on the Right Hand, you shall there find 178 Years since he died Jan. 28. and so of the rest.

SWALLOW.

The latter Part of this
ALMANACK
For the Year of our
LORD GOD,
1724.

Being the *Bissexile* or Leap-Year, and
from the Conquest of *England* by *William*
Duke of *Normandy* 658 Years.

Wherein is contained an Account of the Eclipses; the Time of the Sun's Entrance into the Four Cardinals Signs. Likewise a Table, shewing the Time of the Moon's coming to the South, and Quality of her shining, &c. With an Account of the Moveable Feasts, of Time of a Day, of a Week, of a Month, of a Year, and of the Leap-Year, and of these severally. A Table of Weights and Measures, and the Value of Foreign Coins in *English* Money. Also Tables and Rules how to measure Board and Timber, a Table of Interest, Tables for Purchasing and Putting out of Money for Interest upon interest, as also a Table shewing the Rising and Setting of the Sun &c. with the Fairs, in a larger Manner than formerly.

L O N D O N :

Printed by *Mary Hnde*, for the Company of
STATIONERS. 1724.

Swallow, 1724.

Of the Eclipses this Year 1724.

THERE will be four Eclipses this Year, 1724.

The First is of the Moon, on *Monday* the 27th of *April*, at Eight in the Morning, not visible here,

The Second is a great, and very near Total of the Sun, on *Monday* the 11th of *May*, it begins 40 Minutes past 5, the middle 36 Minutes past 6 the End 26 Minutes past 7 in the Evening.

Parts darkned 11' 45'.

The Third is a visible Eclipse of the Moon, *Wednesday* the 21st of *October*, in the Morning; begins 53 Minutes past 2 the middle, 9 Minutes past Four, and the End 25 Minutes past Five in the Morning Digits Eclipted, 7 4.

The Fourth, is an Eclipse of the Sun, *Wednesday* the Fourth of *November*, at a 11 at Night, so not Visible.

The Sun enters into the four Cardinal Signs as followeth.

15 30	12 0	15 15

The First Column of this Table shews at what Age the Moon rises after Sun-setting, or after his Rising, so many Hours and Minutes as the middle Column shews; as at Two Days old she rises one Hour and 36 Minutes after the Sun setting &c. the Third Column is for the Moon's setting, as at Two Days old she sets one Hour and 36 Minutes before the Sun, &c. the middle Column shews how many Hours and Minutes the Moon shines, which from New-Moon to Full-Moon is to be used with the Third Column; so for her South-ing, as at 6 Days old she is upon the Meridian 48 Minutes past Five at Night, but at 24 Days old she Souths 48 Minutes past Five in the Morning.

Swallow, 1724.

A Table, whereby you may find the Time of High-water at many Havens in and about *England*, and how many Hours and Minutes are to be added to the Time, of the Moon's coming to the South for the Time of High-water, and likewise what Moon makes a full Sea at those Havens.

The Tide-Table Explained.

IN the First Column you have the Point of the Compass, to which the Moon coming maketh full Sea at those Havens mentioned in the second Column, and in the third Column are the Hours and Minutes to be added to the Time of the Moon's Southing. I shall make it plain by an Example.

Swallow, 1724.

The 3d. of *February*, this Year 1724. I would know at what Hour it will be full Sea at *London-Bridge*. First I find the Moon's Age in the former part of the Almanack (accounting it from the Change) to be 20 Days old, which Age I find at the bottom of the Tide-Table, and under the same four Hours the Time of the Moon's coming to the South; then finding in the first Column that a South-west Moon makes full Sea at *London*, I add to her Southing three Hours, as it shewed in the last Column, and it makes seven Hours at Night, the Time of full Sea at *London-Bridge*; also observe, that when the Moon cometh to the contrary (or North-East) Point, it is there full Sea again. Note, That Land-Floods, Spring-Tides, and contrary Winds, make it sooner or later about an Hour.

An account of the Moveable Feasts.

THE Moveable Feasts are so called, for that they have not any fixed Place in the Kalender, as the fixed Feast-Days of the *Saints*, which are always on the same Days of the Month; but they are varied every Year according to the diversity of the Moon, and do fall sometimes later, and sometimes sooner.

Quinquagesima is Shrove-Sunday. *Sexagesima* is the Sunday next before Shrove Sunday. *Septuagesima* is the Sunday Fortnight before Shrove-Sunday; so called in remembrance of the 70 Years that the *Israelites* were under the *Baby-*
onians.

Quintus

Swallow, 1724.

Quadragesima is the first Sunday in *Lent*; so called in remembrance of the 40 Days that *Moses* fasted when they received the Law.

Easter is the principal Feast of all other.

Rogation-Sunday is the Sunday-Fortnight before *Whitsunday*; so called *quia vos rogat Ecclesia*; the Church commands us to continue Fasting, Processions, and Prayers against Bodily and Spiritual Wolves.

Pentecost is *Quinquagesimus*; so called, because there be 50 Days betwixt *Easter* and *Whitsunday* inclusively, observed in remembrance of the Law given to *Moses*; and to the Holy Ghost that appeared to the Apostles like Cloven Tongues, *Acts* ii. 1.

Trinity-Sunday is the next Sunday after *Whitsunday*. *Ascension-day* is the Thursday Seven-night before *Whitsunday*, and *Corpus Christi* is the Thursday Seven-night after *Whitsunday*.

Advent-Sunday is the Day before *Barbara-Day*, which is always the 4th of *December*.

Before any thing is said concerning Days, Weeks, or Months, which are parts of Time, I hold it fit to speak somewhat first of Time, and then of the chiefest Parts thereof.

Of Time.

Time is the Measurer of Motion, or a Number measuring the moving of the first moveable and other mutable Things; which Time had his beginning with the World, and shall end with the same. It consisteth of Two, Parts; that is, first and last, or before and after

Swallow, 1724.

after; both which are knit together in this Word (*Nunc*) now, or as this present, which is the end of that which went before, and the beginning of that which followeth after. Some divide Time into Three Parts; past, present, and to come. Time present is a Moment indivisible, the beginner and ender of Time, and yet the least Part thereof itself.

Time is also divided into greater or lesser Parts; the greater are Calends, Nones, Ides, a Week, a Month, a Year, &c: There is a Space of Time called *Seculum*, an Age, or a Hundred Years. Another Space of Time is called *Ævum*, Ten Ages. The lesser Parts of Time are Five. The First is called *Quadrans*, the Fourth Part of a Day, or Six Hours. The Second *Punctus*, the Fourth Part of an Hour in the Sun's Account, and in the Moon's the Fifth Part. The Third *Momentum*, the Tenth Part of *Punctus*. The Fourth *Uncia*, the Twelfth Part of *Momentum*. The Fifth *Movus*, the Forty-eighth Part of *Uncia*.

Of a Day.

A Natural Day is the Space of 24 Hours, in which the Sun is carried from the East to the West, and so round about the World into the East again. An Artificial Day is the Space that is between the Rising of the Sun, to the going down of the same: And the Artificial Night is from the Sun's Setting to its Rising.

of

Swallow, 1724.

Of a Week.

IT's commonly called in *Latin*, *septimana*, *d* *septem & mane*, which is as much as to say, seven Mornings, or seven Days; whereof the First is called *Sunday*, the Second, *Monday*, &c. Which Names the *Gentiles* gave to the Seven Days, in Honour to the Seven Planets, whom they worshipped as Gods: For they called the First Day, the Day of the Sun, the Second, the Day of the Moon, and so forth.

Of a Month.

Solar is that Space of Time in which the Sun runneth through any one of the 12 Signs, being 30 Days.

Lunar is that Space of Time which the Moon spendeth, while departing from the Sun it returns to the same again.

Usual is that Number of Days which are set down in our common Kalenders, whereof some contain 30 Days, some 31, and *February* 28, and when it is Leap-Year 29.

Romulus first divided the Year into 10 Months and called the First Month *Martius*, *d* *Marte*. The Second *April*, *ab aperiendo*. The Third *May*, *d* *majoribus*. The Fourth *Junius*, *d* *Junioribus*. The rest *Quintilis*, *Sextilis*, *September*, *October*, &c. because they were 5, 6, 7, 8, &c. Months distant from *March*. But after *Numa Pampilius* added Two Months more to make 12, calling the one *January* a *Janua*, because it is a Gate to pass by into

Swallow, 1724.

by into the Year. And the other Month he called *February* a *Februo*, *id est*, a *Plutone*, because the Romans then offered Sacrifice to *Pluto*.

Julius Caesar in his Time altered the Month *Quintilis* to *July*, calling it after his Name; after that *Augustus Caesar* called the Month *Sextilis* *August* after his own Name.

Of a Year, and of the Leap year.

IN *Latin* it is called *Annus*, from *Annulus* a Ring, in respect they both turn round in themselves. *In se sua per vestigia volvitur Annus.*

There be divers Kinds or Differences of Years, and divers Computations had thereof in divers Ages, and amongst divers Nations; but I omit them, and will speak only a Word of the *Julian* Year, which is also Two-fold, Common, and *Bissextile*, or Leap Year; which said Common Year consisteth of 365 Days and 6 Hours, which 6 Hours, if they should be reckon'd at every Year's End would make a great Confusion, and therefore is reckoned at the end of every Fourth Year, which makes the Leap year, consisting of 366 Days. For Four Times Six maketh 24 Hours, which is one whole Natural Day, whereof that Year is called the Leap-year; which Day is added to *February*, because it is the shortest Month, and this Day they put at the 24th of *February*, upon which *St. Matthias* Day falleth.

							100	2	171

Swallow, 1724.

The Use of the Table.

First girt the Piece about, then look the Length of that Girt under the Title Com. and against it is the Length of a Foot solid, in Inches, and Parts of Inches.

Example.

Suppose a Piece of Timber be 80 Inches about, then look 80 under the Title Com. and against it in the next Column towards the Right-Hand is 3 Inches, and 393 Decimal Parts of an Inch. (that is 393 Thousand Parts, supposing the Inch to be divided into 1000 Parts,) for the Length of a Foot.

For Square Timber.

Divide always 1728, (the Cubick Inches in a Foot solid) by the Content at the End, and the Quotient shews the Length of a Foot solid in Inches.

Example.

Let a Piece of Timber be 12 Inches broad and 10 Inches deep at the End, and then the Content will be 120 Inches; which dividing 1728, the Quotient is 14 Inches and ⁴⁸/₁₂₀ Parts for the Length of a Foot solid.

For Boards.

Divide always 144 (the Inches in a Foot square) by the Breadth, and the Quotient shews the Length of a Foot square in Inches.

Example.

If a Board be 16 Inches broad, then 144 divided by 16, the Quotient is Nine Inches for the Length of a Foot, according to that Breadth.

For Circles.

If the Circumference be given, multiply it by itself and then by seven, the last Production divide by 88 and the Quotient shews the Content; If the Diameter be only given, multiply it by itself, and then by 11, the last Product divide by 14, and the Quotient shews the Content.

Swallow, 1724.

The Use of the Tables.

THE first Table shewing the Decrease of one Pound Yearly at 6 *per cent.* may be used in buying Reversions, &c. As suppose a parcel of Land or House, or the like, whose Fee simple or real worth is 200 *l.* and it be Mortgaged or Leased out for 20 Years, then what is the Reversion of one Pound after 20 Years worth in ready Money? For answer, I look against 20 Years, and find that the Reversion of one Pound after 20 Years is worth but 6*sh* 2*d* 3*q*. then if 1 *l.* be worth 6*sh* 2*d* 3*q* 200*l.* will be 200 times as much, which will be 62*l.* 5*sh*. 10*d*. for the value of the Reversion Required.

The second Table may be used in buying of Leases, &c. as suppose I am to buy a Lease of 10 *l. per annum.* for 21 Years, what ready Money may I give at the rate of 6 *l. per cent. per ann.* For answer, I look against 21 Years, and find that 1 *l.* Annunity to continue 21 Years is worth in ready Money 11 *l.* 15 *s.* 3 *d.* 1 *q.* Then I say, if 1 *l.* annuity for 21 Years be worth 11 *l.* 15 *s.* 3 *d.* 1 *q.* Then 10 *l.* annuity for the same time will be worth 10 times as much, which will be 117 *l.* 12 *s.* 8 *d.* 2 *q.* for the value of the Lease required.

The third Table may be used in putting out Money for a certain time at 6 *l. per cent. per ann.* as suppose 1 *l.* be let out for 7 Years, what will it amount to in that time, reckoning Interest upon Interest? For answer, I look against 7 Years, and find that 1 *l.* will amount to in that time 1 *l.* 10 *s.* 0*d.* 3 *q.* then I say, 20 *l.* will amount to 20 times as much, which will be 20 *l.* 10 *s.* 3 *d.*

The use of the following Table is plain and easie, for suppose I am to find *Easter* for the Year 1725. having found the Golden Number 1, and Dominical Letter E, at the bottom of the Table, I look under the Dominical Letter A at the Top, and right against the Golden Number 1, at the left hand, and in the Common Angle of meeting, I find *April 9, Easter-day.*

Swallow. 1724.

A TABLE shewing how to find *Easter* for ever, by the help of the Golden Number and Dominical Letter.
